

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions of claims in this application.

Please amend claims 6, 29, and 31-34 as follows:

1. (Canceled).
2. (Previously Presented) The camera of claim 6, wherein the print information producing device produces the print information further including print quantity information, which expresses a quantity of prints, and the transmitting device transmits the image information and the print information including the print designating information and the print quantity information.
3. (Previously Presented) The camera of claim 6, further comprising:

an inputting device for inputting information necessary for producing the print information, wherein the print information producing device produces the print information on the basis of the information inputted by the inputting device.
4. (Previously Presented) The camera of claim 6, further comprising:

a power source for supplying electricity to at least one of the image-pickup device, the print information producing device and the transmitting device; and

a detecting device for detecting the condition of the power source and for obtaining the power source information, wherein the transmitting device transmits information based on the power source information.

5. (Previously Presented) The camera of claim 6, further comprising:
- a power source for supplying electricity to at least one of the image-pickup device, the print information producing device and the transmitting device;
 - a detecting device for detecting the condition of the power source and for obtaining the power source information; and
 - a display device for indicating the power source information.
6. (Currently Amended) ~~[[The]]~~ A camera comprising:
- an image-pickup device for receiving light to form an image of a subject, for converting the light into electric signals representing the image, and for producing image information of plural different images of plural different subjects by electric signals;
 - a print information producing device for producing print information for printing the image information, the print information including print designating information which designates an image to be printed among the plural different images;
 - a transmitting device for transmitting the image information and the print information to an external apparatus; and
 - a receiving device for receiving image forming apparatus information representing the condition of an image forming apparatus to which the transmitting device transmits the image information and the print information.

7. (Previously Presented) The camera of claim 6, further comprising:
a display device for indicating the image forming apparatus information.
8. (Previously Presented) The camera of claim 6, further comprising:
a device for indicating warning on the basis of the image forming
apparatus information.
9. (Previously Presented) The camera of claim 6, further comprising:
a device for indicating a communicating situation between the camera and
the image forming apparatus.
10. (Previously Presented) The camera of claim 6, wherein the receiving device
receives information regarding the image forming capability of the image forming
apparatus.
11. (Previously Presented) The camera of claim 10, further comprising:
a device for indicating the information regarding the image forming
capability of an image forming apparatus.
12. (Previously Presented) The camera of claim 6, wherein the transmitting device is
a device for conducting wireless communication.
- 13-16. (Canceled).
17. (Previously Presented) The camera of claim 6, wherein:
the receiving device receives receipt information produced by the image
forming apparatus; and
the camera further comprises a display device for indicating the receipt
information.

18. (Previously Presented) The camera of claim 17, wherein the receipt information includes a waiting time for the completion of printing and a receipt condition whether or not information transmitted from the transmitting device is received normally.
19. (Previously Presented) The camera of claim 6, wherein the transmitting device transmits the ID of the camera and the ID of the transmitter with the correlation with the image information.
20. (Previously Presented) The camera of claim 19, further comprising:
a receiving device for receiving information indicating the completion of printing from the image forming apparatus to which the transmitting device transmits the image information and the print information.
21. (Previously Presented) The camera of claim 4, wherein the power source is a battery, the detecting device is able to estimate the situation that the capacity of the battery is insufficient until the completion of transmitting for the image information and the print information, and the display device indicates warning when the detecting device estimates the situation that the capacity of the battery is insufficient until the completion of transmitting for the image information.
- 22-27. (Canceled).
28. (Previously Presented) The camera of claim 6, further comprising:
a receiving device for receiving operating information from an external remote control unit, wherein the print information producing device produces the print information based on the operating information from the external remote control unit.

29. (Currently Amended) ~~[[The]]~~ A camera comprising:

an image-pickup device for receiving light to form an image of a subject,
for converting the light into electric signals representing the image,
and for producing image information of plural different images of plural
different subjects by electric signals;
a print information producing device for producing print information for
printing the image information, the print information including print
designating information which designates an image to be printed
among the plural different images;
a transmitting device for transmitting the image information and the print
information to an external apparatus; and
a receiving device for receiving image information from another camera,
wherein the transmitting device transmits the image information
received from the another camera and the print information.

30. (Previously Presented) A camera comprising:

an image-pickup device for receiving light to form an image of a subject,
for converting the light into electric signals representing the image,
and for producing image information of the image by the electric
signals;
a display to indicate the image on a screen on the basis of the electric
signals;
a print information producing device for producing print information for the
image information for the image indicated on the screen; and

a transmitting device for transmitting the image information of the image together with the print information produced for the image to an external apparatus.

31. (Currently Amended) [[A]] The camera of claim 30, further comprising:
a memory to store the image information including plural different image, wherein the display indicates selectively at least one image on the screen among the plural different image stored in the memory.
32. (Currently Amended) [[A]] The camera of claim 31, wherein the print information producing device comprises an input device to designate an image to be printed with a print order among the plural different images and the transmitting device transmits the designated image and the print order to the external device.
33. (Currently Amended) [[A]] The camera of claim 30, wherein the print information includes print designating information to designate an image to be printed, print quantity information and print size information.
34. (Currently Amended) [[A]] The camera of claim 30, further comprising:
a receiving device to receive receipt information from the external device.
